I. TECHNICAL DATA

INPUT SENSITIVITY/IMPEDANCE/SIGNAL TO NOISE RATIO (IHF "A")	
PHONO 1	MM: 3 mV/33 k, 47 k, 100 kohms/82 dB MC: 0.08 mV/10 ohms/75 dB
PHONO 2	MM: 3 mV/47 kohms/82 dB
TUNER	150 mV/47 kohms/102 dB
AUX	150 mV/47 kohms/102 dB
TAPE PLAY 1/2	150 mV/47 kohms/102 dB
OUTPUT LEVEL/IMPEDANCE	
TAPE REC 1/2	150 mV/600 ohms
OUTPUT	1 V/600 ohms
RATED LOAD IMPEDANCE	47 kohms
PHONO MAX. INPUT LEVEL (1 kHz)	
PHONO 1/2	400 mV (MM)
FREQUENCY RESPONSE	
TUNER/AUX/TAPE PLAY 1/2	5 Hz to 100 kHz $\pm$ 0.5 dB
PHONO 1/2 (RIAA curve deviation)	30 Hz to 15 kHz $\pm$ 0.2 dB
TOTAL HARMONIC DISTORTION (20 Hz to 20 kHz)	
TUNER/AUX/TAPE PLAY 1/2 (Volume Max.)	0.005% at output 10 V
PHONO 1/2 (Volume Max.)	0.005% at output 10 V
TONE CONTROL	
BASS	$\pm$ 8 dB at 100 Hz
TREBLE	$\pm$ 8 dB at 10 kHz
SUBSONIC FILTER	12 dB/oct. at 18 Hz
CHANNEL SEPARATION (AUX)	70 dB (shorted circuit)
SEMICONDUCTORS	Transistors 29, Diodes 48, FETs 2, ICs 11
POWER REQUIREMENTS	120 V, 60 Hz for USA and Canada 220 V, 50 Hz for Europe except UK 240 V, 50 Hz for UK and Australia 110/220/240 V, 50/60 Hz internally switchable for other countries
POWER CONSUMPTION	U/T, AAL, CSA Models: 20 W
DIMENSIONS	440 (W) $\times$ 78 (H) $\times$ 313 (D) mm (17.3 $\times$ 3.1 $\times$ 12.3 inches)
WEIGHT	6.3 kg (13.9 lbs)

* For improvement purposes, specifications and design are subject to change without notice.

II. DISMANTLING OF UNIT

In case of trouble, etc. necessitating dismantling, please dismantle in the order shown in the photographs. Reassemble in reverse order.

V. VOLTAGE CONVERSION

Fig. 4 Voltage Conversion (U/T Model)

1. U/T MODEL (Refer to Fig. 4)

1. Switch off the power supply and remove the plug from the mains supply.
2. Loosen holding screws and remove the top panel.
3. Remove the screw holding the Fuse P.C Board located near the power transformer.
4. Remove existing Line Voltage Fuse and insert required Line Voltage Fuse in the proper fuse holder.
 - 110V : 800 mA 250V
 - 220V : 400 mA 250V
 - 240V : 400 mV 250V

2. MODEL OTHER THAN U/T

No voltage conversion.

VI. ADJUSTMENT

Fig. 5 Pre Amp P.C Board/Instrument Connection

CENTER OFF-SET VOLTAGE ADJUSTMENT (Refer to Fig. 5)

Connect the Digital Voltmeter or DC Voltmeter between the test points on the Pre Amp P.C Board PRA-6001A and the ground.

Adjust VR1 (L-ch), VR1b (R-ch) 1 k Ω , so that the voltmeter reads $0 \pm 0.5V$.

Fig. 3 Top View

V. VOLTAGE CONVERSION

Fig. 4 Voltage Conversion (U/T Model)

1. U/T MODEL (Refer to Fig. 4)

1. Switch off the power supply and remove the plug from mains supply.
2. Loosen holding screws and remove top panel.
3. Align the short pin jacks A and B with the position for each voltage area as shown in Fig. 4 and then plug in.
4. Set the slide switch located at the right hand side of the pulse power supply unit in Fig. 1.
5. Change the fuses, 5A for 110V and 2.5A for 220V and 240V areas.

2. MODELS OTHER THAN U/T

No voltage conversion.

(blocking oscillator circuit), transformer circuit, rectifier circuit and smoothing circuit as shown below.

voltage of 100 to 120V (for the U.S. Canada and Japan), while bridge rectification is adopted for those of 220 to 240V (for Europe, etc.), to obtain a DC voltage of approximately 300V.

Fig. 7 Principle of Starting Oscillation

Fig. 8 Diode Characteristics

Fig. 9 Operation of TR1

2. OSCILLATOR STARTING CIRCUIT

At power switch-on, this circuit creates an initial pulse which starts the inverter circuit of the next stage. D1 is a double-directional trigger diode that quickly turns on when the voltage at both ends exceeds the breakover voltage (approx. 30V) as breakdown voltage flows through it. When the potential of C7 is raised to about 30V by switching-on the power, it will cause a positive trigger pulse to be applied to the bases of TR5/TR6, thereby starting oscillation.

During oscillation, 20 kHz and 300 Vp-p square waves will appear at the intersecting point of TR3/TR4 and TR4/TR5, so that TR1 and TR2 will will repeat the 20 kHz switching operation. That is, the potential of C7 will be discharged when they are turned on, whereas C7 will be charged when turned off. For this reason, the potential of C7 will not reach the break-over voltage of D1, as can be seen from Fig. 9, so that D1 will be in a high-impedance state. And the operations of these circuits are absolutely unrelated to those of other circuits.

Fig. 10 Principle Diagram of Inverter

Fig. 11 Basic Schematic Diagram

3. INVERTER CIRCUIT (BLOCKING OSCILLATOR CIRCUIT)

As illustrated by Fig. 10, the inverter circuit alternately switches the DC voltage ON and OFF, thus converting it to square wave pulses. The switching is achieved by transistors under the use of a blocking oscillator. The operating principle is shown in Fig. 11. The 300V is divided into 150V and applied to the mid-point of C4 (R1) and C5 (R2). (This will be referred as the mid-point hereinafter.)

First, a trigger pulse is applied to the base of TR3 by the oscillator starting circuit. This causes TR3 to turn on and a collector current i_{C2} to flow in from the mid-point. Since this current flows from l_6 to l_4 , current will also be induced in l_5 and l_3 . Therefore, this current will be fed back to coil l_2 of TR3's base, following flux variations in T1 (Troidal trans-

former) which accompany current variations in l_3 . As this loop is formed in a direction that realizes positive feedback, collector current i_{C2} will continue to increase with the increase in the base current of TR3. As a result, the current flowing through l_3 will also continue to increase, causing the flux density to become higher and to eventually reach saturation after the passage of a certain time. When the flux saturates so that the flux no longer varies, the l_3 to l_2 loop will be disconnected as a result. However, even after this positive feedback loop has been disconnected, collector current i_{C2} will continue to flow for a while, due to the action of the counter electromotive force that works in the direction that permits continued current flow. But, soon, the collector current will start to decrease rapidly.

Fig. 12 TR3//TR4 turn-on period

During the above process, TR5//TR6 will be turned on, while TR3//TR4 will be "cut-off". This is because coil $l1$ of TR3//TR4's base is wound in a direction opposite to which $l2$ is wound, so that an inverse-direction voltage will be induced for TR3//TR4's base-emitter potential V_{BE} . For this reason, the potential of the intersecting point of TR3//TR4 and TR5//TR6 will become "0"V. When i_{C2} starts to decrease rapidly, the resultant flux variation will cause a positive pulse to be generated at $l1$, which, in turn, will cause TR3//TR4 to turn on and TR5//TR6 to be cut-off.

Likewise, when the collector (emitter) current i_{C2} flows in the order of $l4$ to $l6$ to mid-point, it will cause a positive feedback loop of $l6$ to $l5$ to $l3$ to $l1$ to be formed, so that a process similar to that just described will take place.

Fig. 13 TR5, 6 turn-on period

In this way, TR3//TR4 and TR5//TR6 will be alternately turned on again and again, causing square waves to be generated. Fig. 13 gives the waveforms appearing at the respective sections during the serial process.

When a potential is produced at R5 (0.22 ohms) due to overload (load shortening, etc.), TR7 goes ON and the base and emitter of TR5//TR6 are shorted, causing the oscillation to stop for overload protection.

Fig. 14 Summary of waveforms appearing at each section

As shown in (d) and (e), the waveform of the base-emitter voltage of TR3//TR4 and TR5//TR6 will become "0" V upon saturation of T1's flux. In the meantime, the base current will flow in the direction similar to that before saturation, because of the counter electromotive force.

Meanwhile, by having a negative feedback applied at the high frequency range, the capacitor provided between the collector and bases of TR3//TR4 and TR5//TR6 will function so as to hold down the wave height to an adequate level to prevent the peak values from rising above the maximum ratings of the respective transistors.

The oscillating frequency of this circuit is determined by such factors as the maximum flux density of T1 and the current flowing through ℓ_3 . It is ordinarily designed to be approximately 20 kHz.

4. TRANSFORMER CIRCUIT

Although it is based on the same principle as that applied to general power transformers, the core material has been changed into ferrite material from the conventional electrical steel plate material to match the input waveform (square wave of approx. 20 kHz). Owing to the high permeability and use of high frequencies, power loss is far less than with conventional transformers. Therefore, it permits miniaturization of circuitry, which is the advantage of using a pulse power supply.

At the same time, the transformer circuit functions to insulate the secondary-side chassis potential from the AC input potential applied to the prime side.

5. RECTIFIER CIRCUIT

Although this is a full-wave rectifier circuit intended for use with both plus and minus power supplied, it employs first recovery diodes having a quick reverse recovery time (t_{rr}) to enable high-efficiency rectification of square waves. Ordinary rectifying diodes cannot be used in this circuit.

6. SMOOTHING CIRCUIT

Because of the high frequencies, it enables direct current having a low ripple factor to be obtained with a small-capacity electrolytic capacitor. Since it has to handle square waves and impulsive triggers, and because of large number of harmonics, the pulse power supply is formed into an LPF (smoothing circuit employing a choke coil. At the same time, to avoid interference caused by radiation and induction of electromagnetic waves, the pulse power circuit, excluding the high-voltage rectifier circuit, is enclosed in a shield case to ensure sufficient shield-off. Packing used for the shield case is made of conductive material if it has been damaged during servicing or for other reasons, it must be replaced with new packing. Otherwise, undesirable radiation from the damaged part may cause noise to generate in other circuits.

VII. ADJUSTMENT

Fig. 15 Main Amp P.C Board

Fig. 16 Instrument Connection for Center off-set Voltage

Fig. 17 Instrument Connection for Bar Meter Sensitivity

1. CENTER OFF-SET VOLTAGE

ADJUSTMENT (Refer to Figs. 15, 16)

Connect the Digital Voltmeter or DC Voltmeter between the SPEAKERS terminal.

Adjust VR1 (L-ch), VR1b (R-ch) 1kB, so that the Voltmeter reads 0 ± 50 mV.

2. BAR METER SENSITIVITY

ADJUSTMENT (Refer to Figs. 15, 17)

Set the METER switch to "x1" position. Connect load resistors to the SPEAKERS terminal.

Input a sine wave signal of 1 kHz to the INPUT terminal and control the input signal level until the AC Voltmeter connected to the both ends of the load resistor reads 10.95V.

Under this condition, adjust the VR2 (L-ch), VR2b (R-ch) 2.2kB so that the BAR METER indicates 5W.

VIII. CLASSIFICATION OF VARIOUS P.C BOARDS

Resistor and Capacitor which is not listed in this parts list, please refer to **COMMON LIST FOR SERVICE PARTS**.

HOW TO USE THIS PARTS LIST

1. This parts list is compiled by various individual blocks based on assembly process.
2. When ordering parts, please describe parts number, serial number, and model number in detail.
3. How to read List

The reference number corresponds with illustration or photo number of that particular parts list.

This number corresponds with the Figure Number.

This number corresponds with the individual parts index number in that figure.

A small "x" indicates the inability to show that particular part in the Photo or Illustration.

Schematic Diagram Number of individual manufactured part.
(not required for parts order)

Quantity of particular part required.

Ref. No.	Parts No.	Description	Schematic No.	Q'ty
FLYWHEEL BLOCK #13				
12-115x	800425	Flywheel Block Assy. Comp.	RDG #13	1
12-116	244506	Flywheel Only	RD-233	1
12-117x	244754	Felt, Flywheel	RD-275	1
12-118	251324	Main Metal Case	RD-236	1
12-119	253080	Main Metal	RD-237	1

4. The symbol numbers shown on the P.C. Board list can be matched with the Composite Views of Components of the Schematic Diagram or Service Manual.
5. Please utilize separate "Common List for Service Parts" for Resistor Parts orders.
6. The shape of the parts and parts name, etc. can be confirmed by comparing them with the parts shown on the Electrical Parts Table of P.C. Board.
7. Both the kind of part and installation position can be determined by the Parts Number. To determine where a parts number is listed, utilize Parts Index at end of Parts List.
It is necessary first of all to find the Parts Number. This can be accomplished by using the Reference Number listed at right of parts number in the Parts Index. (meaning of ref. no. outlined in Item 3 above).
8. Utilize separate "Price List for Parts" to determine unit price. The most simple method of finding parts Price is to utilize the reference number.

CAUTION:

1. When placing an order for parts, be sure to list the parts no. model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Service Manual (Basic Parts List) may be partially changed, please use this parts list for all future reference.

WARNING: $\triangle$ INDICATES SAFETY CRITICAL COMPONENTS. FOR CONTINUED SAFETY, REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER'S RECOMMENDED PARTS.

AVERTISSEMENT: $\triangle$ IL INDIQU LES COMPOSANTS CRITIQUES DE SURETE. POUR MAINTENIR LE DEGRE DE SECURITE DE L'APPAREIL NE REMPLACER LES COMPOSANTS DONT LE FONCTIONNEMENT EST CRITIQUE POUR LA SECURITE QUE PAR DES PIECES RECOMMANDEES PAR LE FABRICANT.

AC INLET SYSTEM

This model is equipped with an AC INLET SYSTEM. Please refer to the AC INLET SYSTEM CHART below for the specific type. By the AC INLET SYSTEM, AC (mains) cord can be connected to and disconnected from the model because the model is provided with socket exclusively for AC (mains) cord on its main body.

Please note, however, that certain models are not equipped with this system and has a built-in AC (mains) cord as before.

When ordering parts, please quote Parts Number, Description and Model Number.

II. MODEL PA-W06

1. RECOMMENDED SPARE PARTS LIST

Because, if the parts listed below are on hand, almost any repair can be accomplished, we suggest that you stock these Recommended Spare Parts Items.

Parts No.	Description	Notes
BA326128	Main Amp P.C Board Comp. PA-W06	
BT325299	△ Power Trans. PA-W04T-30	CSA, AAL
BT325300	△ Power Trans. PA-W04T-40	CEE
BT325301	△ Power Trans. PA-W04T-50	UK, SAA
BT325302	△ Power Trans. PA-W04T-70	U/T
BT326607	Pulse Trans. PT-W06T	
ED562386	Germanium Diode 1S188AM	
ED322772	LED SLP-155D-01	
ED322773	LED SLP-255D-01	
ED323513	Silicon Diode CTU-24R	
ED323512	Silicon Diode CTU-24S	
ED325275	Silicon Diode S5295D	
ED323056	Silicon Diode 1S2091	
ED214457	Silicon Diode 1S2472	
ED624903	Silicon Diode 1S2473	
ED560913	Silicon Diode 1S2473-VE	
ED316143	Silicon Diode 1S2473-HS	
ED326605	Silicon Stack 4J4B41	
ED323057	Silicon Varister MV12	
ED323573	Trigger Diode 1S2093	
ED322810	Zener Diode WZ-040	
ED323530	Zener Diode 05Z-12U	
ED303123	Zener Diode 05Z-24U	
ED322774	Zener Diode 05Z-5.1U	
ED326835	Zener Diode 05Z-8.2U	
EF306951	△ Fuse 2.5A 250V	U/T
EF300580	△ Fuse (EAK) 2.5AT	CEE, UK, SAA
EF300577	△ Fuse (EAK) 5AT	CSA, AAL
EI322791	IC LC7556	
EI326595	IC STK-3062	
EI326832	IC STK0070 (2)	
EI323564	IC TA7317P	
EI323054	IC TA7322P	
EI322599	IC TA75458S	
EI325947	Osc. Trans. P.C Board Assy AM-U06	
EJ650261	△ AC Outlet S-I 6432	U/T, CSA, AAL
EJ296853	△ 3P Inlet CM-3	CEE, UK, SAA
EJ301199	Headphone Jack 3P64M	
EJ322582	Push Terminal 4P	
EJ308834	2P Pin Jack T-5511	

Parts No.	Description	Notes
EP245305	Relay MS24D4-0Z	
EP323350	Relay L-23M DC 12V	
ER325268	△ Power Filter EF-3727-203Y1R2	CEE, UK, SAA
ER325265	△ Power Filter UF-3729 C 182Y2R0	U/T, CSA, AAL
ES324162	△ Push SW. SDG-1P TV-5	U/T
ES679566	△ Push SW. SDG-1P TV-5	CSA, AAL
ES665807	△ Push SW. SDG5P-E 5A/80A 250V	CEE, UK, SAA
ES323786	Push SW. J-K2083	
ES324344	Push SW. J-K2102	
ES324118	Push SW. J-K2105	
ES306725	Slide SW. J-S4017	
ET311792	FET 2SK150 (GR) (Y) (BL)	
ET323529	Transistor 2SA608K-NP (E) (F)	
ET322778	Transistor 2SA608K-NP (E) (F) (G)	
ET311791	Transistor 2SA968 (O) (Y)	
ET219868	Transistor 2SB560 (E) (F)	
ET322598	Transistor 2SB632K (E) (F)	
ET311790	Transistor 2SC2238 (O) (Y)	
ET307195	Transistor 2SC2240 (GR) (BL)	
ET323572	Transistor 2SC2335 (K)	
ET316171	Transistor 2SC536K-NP (E) (F)	
ET322775	Transistor 2SC536K-NP (E) (F) (G)	
ET300931	Transistor 2SD600K (E) (F)	
EV618052	Semi-Fixed/Vol. CR19R 1kB	
EV623193	Semi-Fixed/Vol. CR19R 2.2kB	
EW306428	△ AC Cord (U/T)	
EW305691	△ AC Cord CUL	CSA, AAL

2. MAIN AMP P.C BOARD (PAW-4001) BLOCK

Symbol No.	Parts No.	Description	Schematic No.
2-1	BA326128	Main Amp P.C Board Comp. PA-W06	PAW-6028
2-IC1	EI326595	IC STK-3062	45-8-481
2-IC2	EI323564	IC TA7317P	45-8-424
